PROFILE

Computer Science & Engineering undergraduate (2027 batch) with hands-on experience in full-stack software development, artificial intelligence, machine learning, cloud computing, and DevOps automation. Passionate about building scalable and intelligent systems using Machine Learning, Deep Learning, Generative AI, and Large Language Model (LLM) applications. Proficient in implementing Retrieval-Augmented Generation (RAG) pipelines, cloud infrastructure, and CI/CD automation, with a strong focus on applying technology to solve real-world problems.

EDUCATION

Don Bosco Institute of Technology

Bachelor of Engineering in Computer Science & Engineering; CGPA: 8.32

Bangalore, India

2023 – 27

EXPERIENCE

Webstack Academy

MERN Stack Intern

Remote

Jun 2026 – Jul 2026

- Developed a full-stack AI-powered food delivery web application using the MERN stack (MongoDB, Express.js, React, Node.js) with RESTful API architecture.
- Integrated the Grok AI API to deliver intelligent food recommendations and enhance user interaction and engagement.
- Collaborated in an Agile development environment, following best practices for version control, code review, and continuous integration with Git and GitHub.

PROJECTS

AI-Powered Food Delivery Application

 GitHub

- Developed a full-stack AI-powered food delivery application using the MERN stack, enabling secure user authentication, menu management, and online order processing via RESTful APIs.
- Integrated the Grok AI API to provide intelligent food recommendations and enhance user interaction.
- Collaborated using Git and Agile workflows while optimizing application performance and database query operations.

RAG-Based Chatbot Pipeline

 GitHub

- Built a Retrieval-Augmented Generation (RAG) pipeline using LangChain and FAISS vector database to enable a chatbot to answer questions grounded in custom class data.
- Implemented vector embeddings and semantic search using FAISS for efficient retrieval of relevant context, improving response accuracy.
- Designed the end-to-end retrieval-to-generation flow, integrating document embeddings with an LLM for context-aware question answering.

DeepEye: CNN-Based Deepfake Detection System

 GitHub

- Developed an AI-powered deepfake image detection system using TensorFlow, Keras, OpenCV, and Scikit-learn to classify authentic and manipulated images via supervised learning.
- Designed a Convolutional Neural Network (CNN) based image classification pipeline covering data preprocessing, feature extraction, model training, and model evaluation workflows.
- Trained and evaluated the model on a dataset of over 10,000 images, achieving high classification accuracy through hyperparameter tuning.

TECHNICAL SKILLS

Programming Languages: Python, SQL, JavaScript

Cloud & DevOps: AWS, Docker, Kubernetes, Ansible, Bash Scripting, Linux

AI/ML: Machine Learning, Deep Learning, Generative AI, LLMs, RAG

Web Technologies: HTML, CSS, React.js, Node.js, Express.js

Databases: MongoDB, SQL

Tools & Version Control: Git, GitHub, Postman, Vercel
